

BCL STUDIOS

audio transfer services

An exact transfer like for like from your audio cassette, or additional audio enhancement to get the very best sound, you decide.

BCL studios use only state of art high end cassette machines to get the very best from your audio cassette.

All our systems have standard Dolby B, C and DBX noise reduction. So no matter what your audio tape was encoded with, we can hear it at its best before transferring to our digital server. Once there, we use digital tools and spectral analysis to create the very best audio master files. We then compile and transfer to a master ready red-book standard audio CD.

Once we have the completed master files, we can also supply these files in all other audio formats, please ask about these services.

transfer
from cassette
to master CD
£25
per hour
